## Revitalized Water - the elixir of life

# AQUAKAT<sup>®</sup>

- spring water quality
- better taste and absorption
- prevents lime build-up & rust
- enhances health

## What is water?

Water is an irreplaceable natural resource and the source of all life on earth. It is a tasteless and odourless, clear and colorless fluid, which consists of two of the most common elements in nature: hydrogen and oxygen. Besides suspended minerals and organic particles in soluble form, natural water also contains various gases (e.g. oxygen) and solids (mineral nutrients).

Water is also a storehouse of information. Water contains imprinted energy oscillations, or information, which, amongst other things, influences homeostasis (the body's own regulatory system). Therefore we are not only concerned with physically cleaning the water of pollutants, but also with the energetic deletion of the information of pollutants.

# AQUAKAT®

## Function and Resonance Effect

The AquaKat® is a water revitalization device that emits subtle information patterns which have the effect of changing the characteristics of water. In the same manner as a catalytic converter in a car changes harmful pollutants into less harmful emissions, the AquaKat changes the nature of water by transmitting specific frequency patterns to it. Charged information in the AquaKat causes water to resonant at a specific frequency (like a homeopathic reaction). This causes water's crystalline structure to take on the attributes of natural spring water (see photos below).

Based on our understanding of water's ability to store and emit information, the following can be deduced regarding the effect of the AquaKat: It alters the "memory" of the water by changing the clusters within it, so that the information patterns of tap water adopt an oscillation identical to that of the AquaKat (see graph below). Revitalization with an AquaKat increases water's life force (Bovis reading), converts it to a healthy "left spin", gives it a softer feel and improves its taste. Water filtration and reverse osmosis systems will cleanse water of various substances: chemical, heavy metal and organic contaminants. Unfortunately, they do not restore the energies and information related to them nor do they restore the vitality (life) to water - necessary in activating water's natural healing abilities.

## Information used

The information (frequencies) that are charged on to the AquaKat, are: a composition of different spring waters, oxygen and minerals. This combination enables the AquaKat to transmit a signal equivalent to "perfect natural spring water".

## APPLICATION OVERVIEW

- Water revitalization
- Increases the biological water quality
- Higher bioavailability of dissolved minerals in the water
- Restoration of natural dynamics and harmony (spring water quality)
- Multi-information of diverse spring waters, oxygen and minerals

## Technical Solutions

- Hardness stabilization and lime homogenization
- Protection of water pipes and household appliances
- Less aggressive and less corrosion, protects against rust
- Increased solubility capacity of water to absorb dissolved substances
- Longer storage of water without a deterioration in quality
- Increased hygiene and sanitation as sedimentation does not build-up on pipes
- Permanent function - water retains vitality, even when stationary (not flowing) in pipes

## Health Effects

- Health activation, supports physical well-being
- Energetic cancellation of harmful information in water
- Optimized solubility and higher absorption capacity of mineral substances in the water
- Provides water with positive life force (Bovis reading) and healthy "left spin" spectrum

## Other Benefits

- Revitalized water, rich in energy
- Spring water quality and attributes
- No change in the water's composition
- Fresher taste and changes the nature of chlorine
- Feels softer to touch and taste, without altering the hardness
- Reduced use of soaps, detergents and additives
- No plumbing required to install
- No maintenance or operating costs
- No magnetism, no electricity, no chemicals and not susceptible to frost damage
- Thousands of users worldwide – more than 25 years of usage

## Range of Uses

- Private households
- Apartment buildings
- Swimming pools, hot tubs
- Commercial establishments, including restaurant, laundries, spas, tourist accommodation
- Agricultural use (e.g. livestock watering and processing water)
- Industrial uses (e.g. processing and cooling operations)

## Installation

The AquaKat is easy to install. It is simply clamped onto the main intake water pipe. In cases where the AquaKat cannot be attached centrally to the main water pipe (such as in an apartment suite) the medium or small AquaKat can be fitted in an alternative locations: in the kitchen (under the sink), the bathroom (to the shower apparatus) and/or on the intake water line to the washing machine. The small AquaKat is also well suited for travelling, for use in hotels or recreational vehicles and for use in conjunction with a water filtration or reverse osmosis system. The AquaKat can be fitted to all pipe materials.

## AQUAKAT REMOVES LIME BUILD-UP

Before

After

## NO PLUMBING NEEDED TO INSTALL

## Water - an ideal solvent once again

One benefit of water revitalizing with the AQUAKAT is that lime build-up inside water pipes becomes dissolved and does not re-form. The reason for this is that the water regains its natural capability to hold dissolvent mineral substances as microscopic particles - 200 to 300 times smaller than before (the diagram opposite illustrates the difference). This means that lime does not build up on pipes, in hot water tanks, hot water heating systems, appliances or in commercial, industrial or agricultural operations, especially where water is recirculated or heated. Similarly, rust in steel pipes is dissolved and then washed away like other substances in the water, instead of accumulating or staining fixtures.

Microscopic examination has shown that practically no coagulated crystals form under the influence of the AQUAKAT. Instead, small round and isolated singular crystals are formed that have the additional effect of stabilizing the hardness of the water.

In another comparison, the crystal scientist Dr Elmar Langenscheidt has re-tested the well-known crystallization behaviour of ascorbic acid. In water that was informed by the AQUAKAT, ideal typical uniaxial crystals are formed. Their centre is clearly recognizable. It becomes the centre of a radial corona of interference colours, which indicates a closed crystal structure.

## New insights into tap water

The pleasant and even healing effects of water, which has been treated with the AQUAKAT, are not easily measured or assessed by visual examination. Yet, they can be experienced. During the more than twenty years of AquaKat use in Europe an extensive number of favourable experiences have been documented, including the following:

A leading German plumbers' trade journal "sbz Sanitar-Heizungs-Klima-und Klempnertechnik" undertook a study on the effectiveness of the AQUAKAT. They commissioned a group of plumbers to test the device with their residential customers. More than 80 percent of test participants reported positive results with the AQUAKAT. During the three months test period, it was reported that former problems of lime scale build-up on pipes, in hot water heaters and on appliances (e.g. kettles) resolved themselves. Also participants identified water properties that can only be experienced subjectively, including: the water simply tasted better; feeling softer; the chlorine taste seemed to disappear and when having a shower it felt more refreshing, as if under a waterfall in the mountains.

- A champagne producer was able to decommission their water softening plant
- A hotel now saves 30 percent on its costs for cleaning and disinfection agents.
- A bakery reports that their bread dough is easier to process
- A pasta manufacturer has a similar experience with kneading their dough
- Pub owners and restaurateurs are happy with the notably improved taste of their water, and comment on how it is easier to cleaned glasses and make them sparkle and that the laundry needs less detergent.
- Numerous dairy farms have reported an increase in water consumption by their cows and a corresponding increase in milk production when an AquaKat is installed.
