

The image shows two clear plastic bags filled with compost, standing side-by-side on a bed of green and brown organic matter. The bag on the left is labeled 'Control (40 days)' and contains a brown, fibrous material. The bag on the right is labeled 'Penergetic k (40 days)' and contains a much darker, more uniform and smoother material. The background is a mix of green leaves and brown wood chips.

**Control
(40 days)**

**Penergetic k
(40 days)**

Composting Comparison After 40 Days (using untreated litter/bedding removed from a broiler barn). Control (on the left) was untreated. The bag on right is compost treated with penergetic k (@ 1.0 oz. per cu. yd.). Notice the difference in color, texture and degree of decomposition.
