

LONE OAK FARMS, TULARE, CA

Lagoon Treatment with PENERGETIC G

After observing the positive results of PENERGETIC G lagoon treatment at a nearby dairy in Feb. 2018, Nico Slabber – Farm Manager at Lone Oak Farms started using PENERGETIC G.

Four days after starting treatment, the first thing noticeable was that the lagoon started changing color from nearly black to light brown and microbial activity in the lagoon went from inactive to very active.

In Nico's own words:

"In the past it has been difficult to pump lagoon water due to heavy sludge in the lagoon and now the nutrient water is very pumpable."

"The nutrient water no longer burns the crops being watered."

"A noticeable difference has taken place in the smell of the lagoon – from previously being pungent to now being nearly neutral."

Lone Oak Farms is now using PENERGETIC G on two of their dairy's nutrient water lagoon systems. The same success achievements at the first dairy are also being observed at the second dairy. Lone Oak Farms are now using PENERGETIC technology on their soil and crops.

TREATED WITH PENERGETIC G
(four days after treatment)

TREATED WITH PENERGETIC G
(14 days after treatment, sludge breaking loose and coming to surface)
