

POTATOES WITH PREMATURE VINE DEATH

Southern Alberta - late August 2016

Lower Photo: Penergetic treated portion of field (green in foreground) shows no effect of premature vine death, whereas the untreated (Control) portion shows advanced signs of premature vine death. Upper Photo (close-up): taken (later) 24 hours after been desiccated shows difference in above ground vegetation between Penergetic treated and Control field portions.

PROTOCOL Control: Grower Standard Practice (GSP). Penergetic treated: GSP + 3.5 oz./ac Penergetic k + 3.5 oz./ac Penergetic p (both applied in furrow at time of planting. [Whole field received 3.5 oz/ac foliar application of Penergetic p.]
